HIGH PERFORMANCE COMPUTING

The Rosen Center for Advanced Computing (RCAC) operates a significant shared cluster computing infrastructure developed over several years through focused acquisitions using funds from grants, faculty startup packages, and institutional sources. These "community clusters" are now at the foundation of Purdue's research cyberinfrastructure.

We strongly encourage any Purdue faculty or staff with computational needs to join this growing community and enjoy the enormous benefits this shared infrastructure provides.

| Peace of Mind | Low Overhead | Cost Effective | Flexible |
|---|---|---|---|
| RCAC research solutions engineers take care of security patches, attempted hacks, operating system upgrades, and hardware repair so faculty and graduate students can concentrate on research. Research support staff are available to assist you by providing consultation and software. | Our data centers provide infrastructure, including networking, racks, floor space, cooling, storage, and power. Each cluster is built with a lifespan of five to six years, with free support for the life of the cluster. All of this is included with the Community Cluster Program and is available to you at no extra charge. | We work with vendors to obtain the best price for computing resources by pooling funds from different disciplines to leverage greater group purchasing power. Partners have invested several million dollars in computational and storage resources through the Community Cluster Program since 2006. | As a partner in a community cluster, you always have ready access to the capacity you purchase, with potential access to much more. The Community Cluster Program shares compute nodes among cluster partners when the nodes are idle. This way, you get more computational value per dollar than is feasible as an individual. |

Additional Benefits

- **Parallel Filesystem:** Access to large-scale, high-performance, parallel scratch for running jobs
- **Archive:** Access to the high-performance HPSS Archive system "Fortress" for long-term storage of research data
- **Research Data Depot:** High-performance, expandable space is available to any research group to:
 - Share data and results among your group or with collaborators using Globus transfer service
 - Centrally install and manage the group's applications
 - Define and manage access to custom UNIX groups for easy project-based collaboration
- **Cloud Lab Folders:** Centralize your lab's documents and collaborate in a managed folder utilizing **Box.com**.
- **Version Control:** Self-managed Purdue-hosted Github repositories for documents and source code
- **Remote Desktops:** Access community cluster systems via user-friendly Thinlinc Remote Desktop connections.
- **Notebooks:** Work in Python notebooks on cluster resources for reproducible, shareable data analysis.
- **Cluster Science Gateway:** Access clusters, files, and applications from your browser using Open OnDemand.

COMMUNITY CLUSTER RESOURCES

1

NEGISHI

Negishi is a Community Cluster optimized for communities running traditional, tightly-coupled science and engineering applications. It consists of Dell compute nodes with two 64-core AMD Epyc "Milan" processors (128 cores per node) and 256 GB of memory. All nodes have 100 Gbps HDR Infiniband interconnect and a 6-year warranty.

2

GILBRETH

Gilbreth is a Community Cluster optimized for communities running GPU intensive applications such as machine learning. Gilbreth consists of Dell compute nodes with Intel Xeon processors and Nvidia Tesla GPUs.

3

GEDDES

Geddes is a Community Composable Platform optimized for composable, cloud-like workflows that are complementary to the batch applications run on Community Clusters. Geddes consists of Dell Compute nodes with two 64-core AMD Epyc 'Rome' processors (128 cores per node).

ADDITIONAL RESOURCES

- **Anvil: National resource provider**

Anvil is a NSF-funded national advanced cyberinfrastructure resource operated by RCAC serving thousands of researchers across the U.S. Anvil consists of 1,000 nodes with two 64-core AMD Epyc "Milan" processors each, and delivers over 1 billion CPU core hours through ACCESS (formerly XSEDE) each year, with a peak performance of 5.1 petaflops. Anvil also has GPUs, large memory nodes, and a cloud subsystem. Access to Anvil is free and coordinated by the ACCESS allocation process.

- **Scholar:**

The Scholar cluster is open to Purdue instructors from any field whose classes include assignments that could make use of supercomputing for modeling or data science, from high-end graphics rendering, weather modeling, simulation of millions of molecules, and exploring masses of data to understand the dynamics of social networks.

Coffee Hour Consultations

Coffee Hour Consultations are excellent opportunities in a casual setting to consult and discuss computing questions with ITaP computational scientists.

RESEARCH DATA SOLUTIONS

RCAC maintains several different data solutions to accompany computational systems.

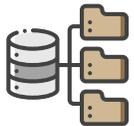

Data Depot: The Data Depot is a high-capacity, fast, reliable, and secure data storage service designed, configured, and operated for the needs of Purdue researchers in any field and shareable with both on-campus and off-campus collaborators.

Fortress: The Fortress system is a large, long-term, multi-tiered file caching and storage system that utilizes both online disk and robotic tape drives. Fortress has an impressive storage capacity of over 10PB and writes two copies of every file — either to two tapes or to disk and a tape — to protect against medium errors.

Scratch Storage: Each cluster is assigned a default Lustre or GPFS parallel scratch filesystem, providing work-area storage optimized for a variety of job types. They are designed to perform optimally with data-intensive computations while scaling well to large numbers of simultaneous connections.

Software Defined Storage: Our central software defined storage resource provides access to on-demand provisioning of block, filesystem and object storage for modern, cloud native workflows on the Geddes Composable Platform and community clusters as well as readily accessible cold storage for large scale datasets.

Globus: Globus is a powerful and easy-to-use file transfer service for sharing files virtually anywhere. Using Globus, you can easily share data with collaborators worldwide with dropbox-like simplicity!

Purdue Data Resources: Purdue offers several storage solutions outside of Research Computing. One such offering is PURR, a research collaboration and data management solution for Purdue researchers and their collaborators.

Controlled Data

Export controlled data: RCAC provides resources for data and computation in support of projects with heightened security requirements. Research requiring protection for human subjects data, Export Control (EAR, ITAR), or Controlled Unclassified Information can all be performed.

REED Folder: A REED Folder is a managed storage solution built on top of the Box.com cloud platform for research projects requiring compliance with regulations or heightened security.

dbGap Capability: To support biomedical applications, RCAC provides data storage capabilities configured to hold data from the database of Genotypes and Phenotypes (dbGaP) and The Cancer Genome Atlas (TCGA).

RESEARCH SOFTWARE ENGINEERING (RSE)

RCAC offers a wide range of research software engineering solutions to help advance scientific discovery, education, enable greater research reproducibility, and generate lasting impact at Purdue and beyond. RCAC's **Scientific Solutions, Envision Center** and web developers has comprehensive experience in software design, programming languages, and deployment platforms gives us the tools to help you create or modify software to take advantage of the latest technologies in advanced computation, web frameworks, data analysis, visualization, and management.

HOW WE CAN HELP

Virtual Simulation

Digital training tools that allow for immersive experiences and learning platforms by utilizing Virtual Reality and Augmented Reality. These tools are great for use in research and the classroom, helping to bridge the gap between theoretical knowledge and practical application.

Multimedia Production

Graphics, animated visualizations, interactive web deployments, and mobile app development are a few of the many ways we can help improve your project. Multimedia productions suit a variety of output, from promotional and publication materials to classroom and research content.

Data Visualization & Analysis

From geospatial to tomographic, the Envision Center can assist in data handling, production, analysis, and tool creation for visualizing complex 3D data.

Website and Web Application Development

Our team of software engineers, project managers, and computational scientists can build science gateways, websites and applications for bringing your research to the web.

Research Software

With expert knowledge in a broad range of programming languages such as Python, C, R, and Matlab, our software engineers can assist with designing, developing, and optimizing research software.

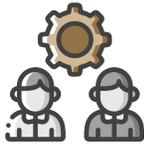

Partner on Proposals

The mission of RCAC staff is to support and advance research discoveries at Purdue through partnerships with faculty, research groups, and centers. Our research scientists collaborate with faculty on grant proposals and support them by providing cyberinfrastructure solutions to funded projects.

TESTIMONIALS ABOUT OUR SERVICES

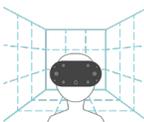

"It's great to have world-class HPC systems like Bell at Purdue. Without these systems, we would not have been able to finish this study." - **Jingjing Liang, assistant professor of quantitative forest ecology**, who used the community clusters for a groundbreaking study estimating the total number of tree species worldwide.

"When you're trying to do science, you don't want to spend a lot of time resolving technical issues. Having someone to help us with that was a tremendous benefit." - **Asif ud-Doula, associate professor of physics at Penn State Scranton**, who used Anvil to develop numerical tools to model the stellar winds of massive stars.

"I cannot overstate the FDA's enthusiasm for your efforts and our continued desire to work with your team to see this materialize into a truly unique and useful tool for all." - **Kyle Hultgren, clinical assistant professor of pharmacy practice and director, Center for Medication Safety Advancement**, who has partnered with RCAC's research software engineers on the SafeRx database and data analytics

"This is a great resource to have at Purdue. Something that would normally cost us \$50,000 to build cost much less. It was a huge benefit to us." - **Krishna Jayant, an assistant professor of biomedical engineering**, who used the Envision Center to develop a virtual reality environment for mice so he could study how memories form.

Track Your Usage

Track which students use the most computing, generate reports for sponsors, and monitor trends in your group's resource usage.

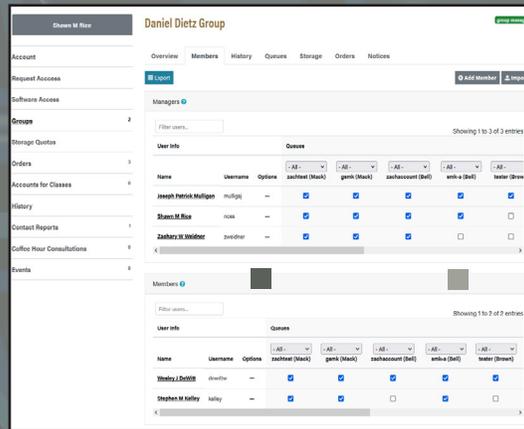

Computational Science Expertise

In addition to the peace of mind gained from professional systems engineering staff, community cluster partners can draw from the expertise of RCAC's experienced computational scientists, software engineers, and visualization experts.

RCAC computational scientists are experienced users of computational resources, with advanced degrees in Engineering, Big Data, Bioinformatics, Biology, Chemistry, and Physics. Computational science staff can help with a wide range of issues: from answering user questions and providing training, code development, software installation, designing effective workflows, and performance analysis. Additionally, research solutions engineers are available to consult on applying new technology solutions for science problems.

You or your delegate can enable or remove access for your students, staff, or collaborators on any cluster queue that you own.

Create and define UNIX groups for students and collaborators to work with group storage.

ADD NEW RESOURCES

Community Clusters | Easy Purchase

ITAP is currently offering purchase of access to nodes in several clusters serving distinct communities. Read the description of each to see which community may best suit your needs.

Negishi | Purchase Now

Negishi is a Community Cluster optimized for communities running traditional, tightly-coupled science and engineering applications. Negishi is being built through a partnership with Dell and AMD over the summer of 2022. Negishi consists of Dell compute nodes with two 64-core AMD Epyc "Milan" processors (128 cores per node) and 256 GB of memory. All nodes have 100 Gbps HDR InfiniBand interconnect and a 6-year warranty.

Login to see pricing options.

Gilbreth | Purchase Now

Gilbreth is a new type of addition to Purdue's Community Clusters, designed specifically for applications which are able to take advantage of GPU accelerators. While applications must be specially-crafted to use GPUs, a GPU-enabled application can often run many times faster than the same application could on general-purpose CPUs. Due to the increased cost of GPU-equipped nodes, Gilbreth is being offered with some new purchase options to allow for shared access at a lower price point than the full cost of a node.

Login to see pricing options.

Research Storage

ITAP offers enterprise-grade storage at a competitive price to help researchers with their unique storage needs.

Data Depot | Purchase Now

The Data Depot is a high-capacity, fast, reliable and secure data storage service designed, configured and operated for the needs of Purdue researchers in any field and shareable with both on-campus and off-campus collaborators.

Login to see pricing options.

Easily purchase cluster nodes or Research Data Depot storage space for your research group.
